Bradshaw Medical Issued Two New Patents

10/15/2010 Kenosha, WI: Bradshaw Medical, Inc. (BMI) announced earlier today that they were issued two new utility patents. The first, US 7,806,027 B1 for their unique torque limiter wrench & method and US 7,810,817 B1 for their holder for replaceable tools found in the BMI non-ratcheting, ratcheting and torque limiting drivers.

These patents were developed by Dr. Hua Gao, Vice President of Research and Development. "Both of these instruments and their components are being well received by the market. Our zero-play adapters are very unique and include floating and automatic capturing features which are available in many varieties of Bradshaw adapters," stated Dr. Gao. The torque limiter wrench & method is a "click" style torque limiting and ratcheting wrench that is used in deep spinal surgeries that enter through the chest cavity.

When asked about these new patents CEO Guy Bradshaw stated, "They are the absolute best in the industry providing the most secure connection of any adapter in the marketplace we serve." This is just another example of BMI's commitment to leading the development charge in the spinal and orthopedic instrumentation field.
